

*Learn how to become successful
in your own business!*

Today you can make the decision to become free by learning how to become successful in your own business. Space-Age products are a win-win choice for you, your family and neighbors. Everyone can either earn an additional income or save money on their monthly utilities. By learning how to conserve our natural resources, we provide a service to our community that is more than a financial benefit to each of us. It improves our ability to become more independent as a nation. It is the prudent and responsible person who teaches others how to cool their homes by reducing their consumption of electricity.

This opportunity to become an integral part of Pacific Solar Technology's network of distributors will be limited. Earn a very respectable income part or full time.

Call today or visit our website to learn more about becoming a distributor.

Who Are We?

Pacific Solar Technologies (PST) is a new company in Hawaii dedicated to providing homeowners and businesses with energy conservation products such as Reflective Foil Radiant Barriers and Solar Powered Fans.

Our distribution network consists of local individuals who desire additional income from their own part or full time business.

PST provides marketing support with on-line marketing materials that you can download and print for promoting the products.

We also provide product seminars that you can bring prospective clients to learn more about our products and how they can cool their homes and save money on utilities.

PST Markets Products make a home cooler and saves on utility bills!

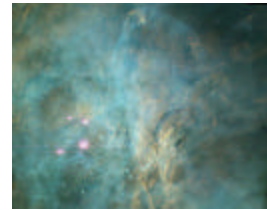

As an independent distributor, you will receive training on the products, energy management and analysis. You will also receive training on installing Reflective Foil Radiant Barrier inside of an attic.

PST provides on-line training and education materials as well as Hot-Box Demo cases, heat measuring laser guns, and other equipment at cost.

Finally, PST provides customer financing to help you close the sale!

INCOME OPPORTUNITY

In the current market, Reflective Foil Radiant Barrier retails for \$0.40 - \$0.60/sf and installation ranges from \$0.20 to \$0.40/sf. A home that would take 1000 square feet of radiant foil would cost the homeowner between \$600 and \$1000 (supplied & installed). Which is generally less expensive and more effective than insulation. As a distributor, you could earn between \$280 and \$800 to supply and install 1000 sq. ft. of radiant barrier—one roll—which could easily be installed in one day. And you can increase your income by using our group volume purchase system.

Space-Age Products equal Opportunity for people who desire more in life.

Pacific Solar Technologies sells Reflective Foil Radiant Barrier by the roll (1000 sq.ft.): (Lowest in Hawaii)

		WHOLESALE PRICE TABLE		
		W1	W2	W3
No. of rolls	1—4*	5—20	21-100	101+
Price/roll	\$400	\$320	\$270	\$200

*PST's retail price is \$40/roll up to 4 rolls

Other products are available at wholesale such as solar fans, gable and ridge vents, etc. As a distributor, all of our products will help you to help you neighbors to cool their homes while saving on utilities.

BUSINESS OPPORTUNITY

By building a network of distributors, you can reduce your cost and increase your profits by using our group volume purchase system. How does this work? Anyone that you recruit as a distributor can purchase at wholesale directly from PST. Their volume is added to your accumulated volume and once your total group volume reaches the price breakpoint, your total discount is increased to that next level—which means you can reduce your cost and earn additional income on

Earn Big Bucks while helping your neighbors to save on their utilities

Build your own distribution network

the sale of each roll your purchase and resell. For example, if you recruited 5 distributors and each distributor including yourself purchased 5 rolls for the month, the cost for each roll would be \$320.

However since your group volume is equal to 25 rolls, your price drops to \$270 per roll which equals a \$250 (5 x \$50) credit to your account. From this point on your purchase price is \$270 until you reach the next level. Better yet, your total group purchases are always accumulated, which means you do not have to start over each month. If your group averaged 25 rolls a month, it would take only 4 months to reach the highest discount level (W3) and your cost per roll would be equal to \$200 from that point on. At \$0.40/sf retail, that's a 100% profit margin or \$200 per roll. At \$0.60/sf retail, that's a 200% profit margin or \$400 per roll. Add installation labor of \$200 to \$400 per roll and you can earn on the low side—\$400 and on the high side—\$800. AND each of the distributors in your group can have the same business opportunity. Each can have their own group volume as well. The average home will require somewhere between 1000 and 2000 square feet of radiant barrier.

Now why would a homeowner want to pay \$600-\$2000 for a Reflective Foil Radiant Barrier? Most homes in Hawaii are hot because they do not have adequate ventilation or insulation. A Reflective Foil Radiant Barrier provides the best protection from the sun's radiant heat which is the single greatest reason for a hot home. Also installing a Reflective Foil Radiant Barrier is hard and very hot work. Not many homeowners can do it on their own and they are willing to pay a fair price to have it installed professionally. The cost for other competitive products such as fiberglass insulation or blown in insulation is generally higher, and in the end they will save money on their utilities and have a cooler home!

Join our team today and become a star in the PST universe.
